

Plasterboard is the preferred material of the modern construction industry for both residential and commercial buildings. The new and unique anodised aluminium profile **PS 130**, has been designed to work with plasterboard installations as both a finishing and decorative element for an added value. This new profile is ideal to be used with this type of substrate both as a negative jolly providing a modern minimalist effect with the option of joining it to the floor with the skirting board series PLANO DESIGN BF or as a decorative ceiling gap, in line with the latest design trends. The visible section of 13mm x 13mm perfectly fits with the most popular plasterboard thickness.
